

GreaseMax chain lubrication

GreaseMax lubricators provide an excellent solution for the lubrication of chains.

Where GreaseMax units with chain oil are used the extension line length is not restricted. GreaseMax control valve, part number GF16000, is used to prevent oil draining from the lines and GreaseMax brush, part number GF17000, is used to ensure even application of the oil onto the chain.

GreaseMax oil units, mounted in brackets, P/N GF10001

Control valve P/N GF16000

Brush P/N GF17000
